

# DID YOU KNOW SLEEP IS A MATERIAL SPORT?\*

\*A sport where the quality of the material is crucial to a successful result.

## On gravity and dynamic spring systems

If you already own a DUX, you'll know it should be easy to relax.

In quantum mechanics, it is said that a particle can be in two places at once. We can't promise that our continuous coil springs have quantum mechanical properties. However, we can promise that a DUX bed will allow you to feel heavy and light, at the same time.

It is not our beds that make you feel heavy, but the Earth's gravity. For four generations, we have developed our beds to dynamically distribute your weight so you can sleep more deeply and efficiently. For personalised ergonomics, choose a bed with our unique Pascal

system that offers adjustable comfort zones for your hips, back and shoulders.

A DUX bed is designed to give you the ability to relax. Over time, you will build up a personal relationship with your bed and further develop your sleeping skills. For you, it may not be the rest itself that is important, but the feeling of waking up rested.

A bed that can both embrace your weight and make you feel light creates the basis for exquisite comfort. Such a bed can only be made from years of expertise and carefully tested materials. That bed is a DUX.
